STAGE 1 FAQ

1. **What were the protocols of the Vendors?**
   - OPCUA, it was in the PLC Website. For Wireshark, the preferences need to be changed as it wasn't using the default port
   - Modbus, you should see through Wireshark

2. **Were there other systems in the network?**
   - Additional systems have been deployed and form part of the network.

3. **How to manipulate the values?**
   - For spoofing attacks, MITM can be used.
   - For manipulation of tag values, there are public packages that allows you to communicate with the PLCs using their protocols. One such package is the python-opcua
